

---

Based on feedback we received when we published our GDPR resources and guidance, we have amended and updated various documents.

## Updates as of 23 May 2018:

- **Walker Registration Form**

In addition to the editable PDF versions of the walker registration forms, we have now created editable word versions. You can download these [here](#).

For the version with the blank box for schemes to write their own consent statement, we've changed the contact options so they also include post and phone - not just email. A number of schemes requested this change, and the multiple contact options are all included on the in the 'add new walker' form.

- **Volunteer Consent Form**

This is also now available to download as an editable word document from [this page](#).

- **Instructions for web and data administrators**

This guidance document has been updated and now includes more detailed information about using the new 'add new walker' form, and inputting the correct consent options depending on which walker registration form you use. Download the revised version [here](#).

- **Health Survey**

The test survey we sent a link to last week (and the print version) did not ask about age or if the walker has a long term illness, health problem or disability, as the old health questionnaire did. This was an oversight, and these questions have been added back into the survey.

The print version of the survey has been edited to fit onto one double-sided bit of paper, and now includes these questions which were missed out. You can download the updated print version of the health survey [here](#).

- **Health Walk Register**

We have updated the health walk register, removing the final column which asked if a walker's health condition had changed, as requesting this information is not GDPR compliant. You can download the updated version in the [leading a walk kit](#).
